

MPS 35 Natural Goodness From Aloe

Immune Enhancing Powder with Beta Glucan & Fruit Antioxidants
RECOMMENDED FOR CHRONIC SERIOUS HEALTH SYMPTOMS

What are Mucilaginous-Poly-Saccharides (MPS 35)? MPS molecules come from aloe. Aloe is a plant that is native to Africa, full of life giving water (96%), vitamins, minerals, essential oils, enzymes, anti-inflammatory fatty acids, mannose, galactose and glycoproteins. Known as “Lily of the desert” or “plant of immortality” this food has been used throughout history for a variety of healing purposes, both internally and externally. Galactose and mannose, two of the key ingredients in MPS 35 aloe, are sugars that the body needs to produce a molecular chain so pathogens do not bind to the cell. Historic uses of this plant include: colitis, peptic ulcers, digestive tract impairments, Crohn’s Disease, circulation, lymphatic, inflammatory conditions, kidney, liver, gall bladder, auto-immune disorders, Lupus, Fibromyalgia, Chronic Fatigue, Rheumatoid Arthritis, Cancer, Multiple Sclerosis, mental disorders and dysfunction. Recently this molecule has been used as an adjunct therapy for patients with HIV.

With the discovery of MPS we can increase the healing powers of the plant because the patented process concentrates the product. The molecule itself is a long chain sugar composed of glucose and mannose, which create a linear long chain when strung together. There is a great advantage in the body when the chain length is lengthened. The body is geared to break down whatever we ingest into tiny molecular and sub-molecular structures. The longer the chain, the more chance there is for the chain to stay intact and reach the therapeutic levels required. This product offers a unique opportunity for more rapid healing when using Aloe Vera as the healing mode. The long chain sugars are used by the body to create proper communication between the T-Cells and macrophage, allowing the body to do its repair work, as it was designed to do.

Why Should I use the NEWtritional Health Care brand of MPS? MPS 35 is created from natural ingredients. The primary ingredient is the MPS molecule from aloe, which has been researched in depth by the patent holder, who has over 90 patents on this molecule. The FDA found that the P450 results classified this molecule as food, which means that it is considered safe. The patented formulation includes alkaline electrolytes to promote rapid intercellular movement. It also includes Vitamin C Complex, a strong antioxidant blend of Vitamin C, Bioflavonoids, Organic Fruit Powders & Calcium. The Beta Glucan combined with the Vitamin C Complex & alkaline electrolytes boost the protection from free radical damage in the body and ensure rapid bioavailability. Additionally, because our company is concerned for your overall well-being, we have been able to bring this to the market at a remarkable price. Competitive products sell for up to *\$150.00 for a one-month supply*. **Our formula retails for \$72.00 for a two-month supply!!!!**

Does MPS 35 reduce inflammation? Yes, this is an anti-inflammatory product. It may be used with symptoms caused by arthritis, acid or gastric reflux, or ulcerative colitis.

Is MPS 35 helpful as a free radical scavenger? Yes. Because MPS 35 acts throughout the body and cells, both extracellular and intracellular, its effects are penetrating the bodies' structures. It is a free radical scavenger and its ability to move freely throughout the body makes it a particularly important product. It may be used with symptoms of cancer, Parkinson's Disease, heart disease, and arteriosclerosis. It is also good at promoting the detoxification of your system that may occur from environmental pollutants. Remember, if a cell is damaged due to virus, bacteria, trauma, oxidative stress, or toxins you have free radical damage. The cell does not

regenerate properly. It may become a cancer cell. The Macrophage are the quality control cells that make sure that these improperly generated cells are rejected by the body.

Does MPS 35 aid in fighting bacteria, virus, yeast, and fungus that is unwanted? Yes. As we all know, the body contains beneficial bacteria, virus, and yeast. However, we also find unwanted bacteria, virus, yeast, fungus, and amoeba in our body. It is important to recognize that fact. We want to target those that are NOT beneficial, and not those that are beneficial. When we take some pharmaceutical medication, there is no distinction between the targeted and untargeted microbes. With MPS 35 we have an all-natural anti-bacterial, anti-viral, anti-yeast, anti-fungal, and anti-amoeba effect and we have that without the nasty side effects of some prescription medication.

According to Michael Lerner in his paper Herbal Therapies for Cancer, "... in a pair of studies carried out at the Pasteur Institute in Madagascar in 1980 and 1981, researchers found that mice given a hypodermic injection of unrefined Aloe extract were protected against infection caused by the bacteria *Klebsiella pneumoniae*, *Listeria monocytogenes* and *Yersinia pestis*, *Plasmodium berghei* parasites, and *Candida albicans* fungus. In the first study carried out with *Klebsiella pneumoniae*, direct bactericidal activity was not detected, indicating that the aloe fraction was a non-specific immunostimulant. The anti infectious activity was proportional to the dose of extract injected, the protective power being greatest when the mice were treated with aloe two or three days prior to infection. The injected mice developed resistance multiplied from thirtyfold to a hundredfold."

Will MPS 35 affect my Immune System? Yes. This product is an immune enhancement product known as an adaptogen (modulator). The immune system is composed of innate and adaptive defense mechanisms. MPS will restore the communication systems with Galactose and mannose and other phytonutrients, allowing the body to do its job properly. The innate system goes looking for pathogens, such as virus, bacteria and other toxins. The adaptive system decides what to do once the pathogen is found. There are Suppressor molecules that need to be activated to keep the body from attacking itself and MPS opens the communication pathways for this to activate. For those with the symptoms from AIDS, Chronic Fatigue Syndrome, auto-immune diseases, Fibromyalgia, Multiple Sclerosis, heart disease, cancer, various infectious diseases, chemical and pollutant exposure, and other diseases related to the aging process, we find that this product will enhance the body's immune system and the body will react appropriately to ameliorate the symptoms. The molecule directly activates the Macrophage and this passes through the liver. The increased phagocytosis by macrophage creates a greater destruction of cells that are damaged or infected. Interleukin and interferon levels in the body increase and then the response of T-Cells and Monocytes are increased. This increases the growth of new cells both inside and outside of the body causing more rapid healing and the anti-pathogenic effect.

Additionally, it is believed that the product promotes the shutdown of blood supply to tumors, aiding in their destruction. Suppressor cells that may not be activated become activated. The body then knows to stop attacking itself. Per Lerner, "Aloe also decreases thromboxane production by platelets in vitro. Thromboxane is produced by platelets and enhances platelet aggregation, which under normal circumstances is the process by which blood clots and wounds begin to heal. But this same coagulation process can also thicken the blood and promote the arrest of cancer cells that have broken loose from tumors to become lodged at distant sites, which is a critical step in the metastatic process. As an anticoagulant, aloe might inhibit tumor cell arrest at potential metastatic sites." Additionally he quoted from a study done by Harris that "It is believed that acemannan (the MPS molecule) exerts its anti-tumor activity through macrophage activation and the release of tumor necrosis factor, interleukin-1, and interferon."

Does MPS 35 aid patients with diabetes? Yes. MPS 35 promotes the reduction of blood sugar for Type 1 and Type 2 Diabetes. According to Lerner, “The rate of gluconeogenesis in isolated hepatocytes [liver cells] as well as activity of [key gluconeogenic enzymes] in liver homogenates [finely shredded tissue] is significantly lowered following treatment with the plants extract...It is concluded that the anti-diabetic action of the plants extract may, at least partly, be mediated through decreased hepatic gluconeogenesis.”

What do doctors have to say about this product? I found this product to be very effective in treating my patients for a variety of conditions. There does not seem to be any adverse reactions. Toxins are eliminated by the body and I see improvement in my patients. Their symptoms are affected greatly over time. It is important for those with serious conditions to follow the instructions on the dosage sheet. Consulting with your health care provider is always recommended for those taking prescriptions or with serious conditions. I use the product for patients with cancer, AIDS, Diabetes, Multiple Sclerosis, arthritis, Parkinson's Disease, heart and arterial conditions, digestive function diseases, infectious disease, liver disease, varicose veins, pollutant allergies and asthma. It works extremely well, for example, on ulcerative conditions throughout the digestive tract providing quick relief of symptoms and promoting healing in the process. As a free radical scavenger it has been very useful as a companion treatment for cancer patients and patients with other toxic conditions. I highly recommend the product. Let me give you some examples of patients that I have treated for various ailments.

I have a little boy, he is only 8, who is a patient. Imagine being 8 years old and having asthma so badly that you have been on inhalers and other prescription medicine since the age of 2!! This child was restricted in activity and could not do all of the things the other boys could do. It caused him more problems than just the physical condition alone. I treated him with this product for 6 weeks and he became symptom free! Now he is off of his prescriptions, on a maintenance dose, and out playing with the other children. It has made such a difference in his life. And speaking of children, this product is just a blessing for mothers and small children. Many children have suffered with cholic and other chronic disorders or repeating infectious disease. When used with these infants and small children, there is a rapid response. I recommend using it in water or with Infalnic.

One of my patients, Neil H., suffered from severe ulcerative colitis. He had been on Prednisone and other pharmaceutical medications for several years. That is very hard on a persons system. He began taking this product and within 4 1/2 months he was off of all prescription medication. To this day he is symptom free and he takes his maintenance dose every day. Now he can eat a broad range of food that previously irritated his system and he is off of drugs that could have long-range negative impact on the body.

Patients with varicose veins find that their symptoms are greatly reduced. Swelling is relieved, pain is lessened, and they can feel warmth in their legs. Any vascular inflammation is positively affected, including the type that may cause edema, palpitations and pulsations of the heart and arteries. The positive effect on circulation may improve the person's ability to get around, remember things, and lessen fatigue.

For those with infections, this is preferable to taking antibiotics. We all know that the antibiotics can have a deleterious effect in the body on those microorganisms that we consider vital and beneficial to the digestion process. When we kill these beneficial microorganisms we lose a defense line in our battle against negative organisms that may attack our system. I recommend taking this product as a method to combat those infectious diseases.

Do you realize that even pets with illness can safely benefit from using this product? I find it is easy to treat a pet, because you just mix the product in water or food for the pet and the pet likes it. Pets get a variety of illnesses, just as people do and this is one natural method to help your pet feel better from minor and serious symptoms.

The effect on cancer patients is tremendous. They respond very well to MPS as it is a powerful immune stimulator and I use it as an integral part of our cancer therapy. Chronic skin disorders clear up rapidly when used in combination with our detoxification diet. Chronic Fatigue Syndrome and Fibromyalgia Syndrome patients respond rapidly when MPS 35 is used in conjunction with natural growth hormone products. While I do not say that we can always use this product alone to act, we can in some instances use it alone. But it is a definite contributor to healing in even serious chronic disease. I would not be without it in my practice.

Dr. L.E.D.
KC, MO

Is this product made from highly concentrated, natural Aloe? Yes, the basis for this product is the natural MPS molecule. The advantage of the molecule is that it has maintained the long chain linear structure, blocking the break down of the chain into smaller sugars which will not promote healing as rapidly or completely. The formulation also includes electrolyte balance & is high in pH, unlike others on the market. This ensures the right condition for healing in the body. This natural Aloe Vera product, containing no preservatives is the recommended one.

SUGGESTED ADULT DOSAGES FOR CHRONIC SERIOUS HEALTH SYMPTOMS

The suggested ADULT dose for starting on the MPS 35 is to use one-quarter teaspoon with four ounces of good spring water on the first day. Be sure to stir the powder into the water till it is mixed thoroughly. Take on an empty study upon rising. Do not have any liquid or food for one half hour after taking this.

When there is a chronic, serious situation, therapeutic doses should be determined by your physician or health care provider. Do not exceed 3 teaspoons daily unless used in initial load dosing. When load dosing, be sure to drink plenty of water and get extra rest. If you are taking more than one teaspoon, take the dosage several hours apart. For example, a three-teaspoon dose may be spread out over the course of the entire day.

MPS 35 evokes immune modulating effects. As a result you may notice detoxification occurs. During this period, you may lower or stabilize the dosage until you notice the detoxification leveling off. When you have therapeutic effect that is noticeable, or when you feel your dose is too high, it is appropriate to lower the dose. It is best to stay on high doses until you are certain that there is considerable improvement in serious situations. Consider using pH Plus in your water throughout the day in order to aid in flushing toxins from the system more quickly.

If there is no serious health issue to consider, you may wish to take one teaspoon daily for rejuvenation. Maintenance doses range from 1/4 to 1 teaspoon.
