

Instant O₂

- **Stabilized Dietary Supplement**
- **Boost the Oxygen Level in Water**
- **Provide Additional Oxygen for Your Body**
- **What a Noticeable Difference!!**

Our bodies obtain oxygen when we breathe. Many of us don't know that we also obtain oxygen from water. Actually, we obtain approximately 25% of oxygen from the water we drink. As we age, our systems no longer function at full capacity. Our bodies have toxins, which reduce the amount of lung capacity that we have. We seem to drink less water. Instead we choose other beverages. **Instant O₂** is a vital component in our daily supplement regimen. The benefits to our body are invaluable as the oxygen levels in the body need to be sufficient or all of the other things that we do will be less effective.

There are many factors that reduce the amount of oxygen in our bodies. Carbonated beverages (such as sodas), smoking, alcohol, polluted air, stress, illness, lack of appropriate nutrients and other things rob us of oxygen. Oxygen and water are required for making nutrients such as vitamins, minerals, and trace minerals soluble and bioavailable. This is how that works. Oxygen is the molecule in the blood that carries all of the nutrients throughout our bodies. Oxygen aids in converting nutrients to energy. Vitamins, minerals and electrolytes all travel through the bloodstream attached to the O molecule, which has 8 nucleating sites. The fact that these nucleating sites are available clearly indicates that oxygen is one of the most needed elements for life to exist. It is vital to have appropriate oxygen levels in our bodies for these chemical reactions to occur. The digestion of the nutrients can only occur with appropriate chemical reaction. The distribution of the nutrients can only occur with appropriate amounts of oxygen.

Oxygen is required to eliminate waste and toxins in the body, especially carbon dioxides. Red blood cells become energized. Without enough oxygen, we slowly kill our cells and accelerate the aging & disease process. Oxygen therapy is even utilized by some healing practitioners in the treatment of cancer and other diseases. Oxygen accelerates the healing of cuts, burns, and infections. Our body can better resist the effects of viruses and bacteria, and we can promote the neutralization of those through the use of **Instant O₂** and **pH Plus™**. We should remember that oxygen is the great purifier in life, as is water. Oxygen can kill bacteria, viruses, yeast and fungus that are unwanted in the body. It is effective in reducing free radicals that may be causing problems with our overall health. We know that free radicals are present in all of our bodies. They normally die within 20 seconds, and are not problematic. But for some of us, an over abundance of free radicals pose a threat to good health. The anti-oxidant supplements should be taken along with **Instant O₂** if this is a factor for you. We strongly recommend juicing, salads, and eating a wide variety of fruits and vegetables. For those on the go, try our **Ultimate Fruit and Veggie Formula**. It will give you the phytonutrient value of five servings daily!

Instant O₂ concentrate is a convenient and inexpensive way to add vital oxygen to our system. Just 10 to 15 drops in a glass of water will provide additional oxygen to our body. Feel the instant difference after just one glass. Ordinary water generally contains less than **5 ppm (parts per million)**. Natural spring waters may contain about double the oxygen of city water. By adding **Instant O₂** we can increase the oxygen level in the water to over **1700 ppm**. And our concentrate is so affordable. At \$18.00 a bottle, you can make up to 120 glasses of water, which costs you **less than fifteen cents** per glass!

Some of the **benefits** of having more oxygen in your system are:

Higher Levels of Oxygen in the Blood
Increased Stamina and Energy
Improved Digestion

Slows the Process of Aging and Degenerative Disease
Free Radicals Become Neutralized
Great for Sports Enthusiasts

Try our **Instant O₂** product today and notice the difference immediately. For those of you purchasing a bottle of our **pH Plus™**, please refer to the benefits of that product for balancing pH and electrolytes. When used in combination, the results are remarkable!

A little bit of science for interested parties.....

Without oxygen, we would not have water. Without either, we would not have life on this planet. When you think about it, adding **Instant O₂** and **pH Plus™** makes sense because we are insuring that we can maximize the effectiveness of the water we are drinking to benefit our health and help reverse the aging and disease process.

How is Instant O₂ different than other oxygen supplements?

Instant O₂ utilizes O₂ as the stable oxygen molecule. Some products claim to use O₃. However, this is not really possible. O₃ is a highly unstable molecule, and its structure changes very quickly and it reverts back to O₂. O₂ is the most stable of all oxygen. That is why it is the most usable by our bodies. Additionally, there are products that use salts as a base of their oxygen supply. For those with high blood pressure or for those avoiding salts, this may not be the treatment of choice.

I am going camping & am unsure about the quality of water I may find to drink. Will Instant O₂ help?

When faced with the possibility that the water you are about to drink may be polluted, add 15 drops of Instant Oxygen and 8 to 10 drops of **pH Plus™**. The combined effect of the oxygen and the pH adjustment will reduce the possibility that any bacterial or viral colony can live in the water, and therefore reduce the likelihood that you will become ill.

Can I use Instant O₂ have allergies or a cold?

For those of us who have degenerative diseases, allergies, don't get enough fresh, clean air and who may take drugs (prescription, alcohol, tobacco), using **Instant O₂** can be beneficial. Toxic states in the body stress all of our systems. Oxygen is required to combat these conditions.

We also need to maintain the proper pH balance in our body for bioavailability.

Our **pH Plus™** formula is unique. It contains the electrolytes that are vital to extracellular and intracellular penetration in our bodies. No one electrolyte can do this. The electrolytes should be properly utilized for bioavailability. Because our formula is properly balanced, when we drink water that has **pH Plus™** in it, the water is absorbed instantly in the body. It begins to absorb in our mouth and as it passes through our system into the stomach. In fact, not much of it reaches the stomach. This is very beneficial. Our body needs to gain the benefit of oxygen, electrolytes and water going straight to the cells and bloodstream. When you use **pH Plus™** and **Instant O₂** together, the digestion of the water containing the oxygen begins as it enters the body, giving you maximum bioavailability and absorption.
