

Sugar Shocker with Insulin Support Factors

- **Promotes Normal Levels of Insulin & Blood Sugar**
- **Promotes Nerve and Vision Health**
- **Provides Antioxidants that Fight Free Radicals**
- **Supports Circulation & Nutrient Deficiencies**
- **Promotes Cardiac and Vascular Health**
- **Digestive & Kidney Function Support**
- **Promotes Better Metabolic Function**
- **Blend Contains Over 70 Components**
- **pH Balanced with Synergistic Factors for Maximum Bioavailability**
- **Contains: Vitamins, Minerals, Trace Minerals, Enzymes, Amino Acids, Herbs, Digestive Support, Vision Support, Antioxidants, Food Extracts & Concentrates**

Sugar Shocker with Insulin Support Factors is the balanced and bioavailable multivitamin formulation for promotion of better health. Those with insulin control issues such as diabetes, hypoglycemia, Syndrome X, glucose intolerance or sensitivity and insulin resistance normally show decreases levels of vitamins and minerals. There may also be a concern with circulation, heart health, strokes, vision, kidneys, loss of limbs and other functions in the body that suffer due to a lack of insulin production in the body. This formula promotes the ability of the body to make insulin. Additionally, it provides ingredients that support the control of sugars and vision, vascular and circulatory functions, and kidney function health. There are lipotropic factors and other ingredients that support metabolic processes, which includes metabolism of fats and proteins. As in Ayurvedic Practice, which focuses on increasing health as opposed to decreasing symptoms, we have included ingredients that focus on increasing health. While we also include items to decrease symptoms and promote repair to eradicate the cause of disease, we understand that where there is health, there is no room for disease.

Ingredients in this formula were selected to support better health and functioning for people who may have a history of insulin sensitivities in their family, may be diagnosed with insulin sensitivities, and for those who are aging and experiencing glucose intolerance.

The pancreas is responsible for insulin production and the islet cells, particularly the "B" (Beta) cells, have the major role in this function. **Sugar Shocker** has been developed in conjunction with a doctor who practices natural healing techniques and who uses natural products for support of the body's systems whenever possible. There are a number of known nutrients and phytonutrients (including herbal extracts) that have a positive effect on the body's ability to manage the insulin/glucagon (I/G) ratio. Our formulation is specifically designed to include these factors. Some well-known factors include Corosolic Acid, Gymnema Leaf Extract and Memordica. Corosolic Acid (Banaba Leaf Extract) that has been clinically proven to promote normal blood glucose transport into the cellular structure. High levels of Gymnema Sylvestre Extract are included to promote pancreatic function and to aid the body in rebuilding the Beta Islet cells. Memordica (Bitter Melon) has been used for thousands of years in Asia to promote glucose tolerance and it is also included. Our formulation includes herbal extracts and other ingredients to support this process. Insulin facilitates glucose entry into cells. The body must contain the proper essential fatty acids and amino acids for this function to work properly. **Sugar Shocker with Insulin Support Factors** adds these ingredients (Borage and amino acids) to promote this function in the body.

Just as importantly, this product includes ingredients that support the body in basic nutritional elements. Doctors and scientists have discovered that those who have diabetes are at risk for deficiencies in minerals and vitamins, as well as other important components for good health, such as enzymes, amino acids and trace minerals. **Sugar Shocker** contains these important components and the formula contains high levels of those ingredients that are known to be extremely low in those with diabetes and other glucose related maladies.

As most of us are aware, those who have these kinds of problems are at risk for impaired vision, reduced kidney function, circulatory and blood vessel problems and stress on the nervous system. A portion of this is due to a lack of antioxidants and free radical damage. **Sugar Shocker** is loaded with a wide variety of antioxidants that are known to be effective. Our formulation is in a base of natural, whole food extracts and contains vision support factors, super antioxidants, support for improved mental function & mood, natural energy boosters and metabolism factors. Since the modern food supply is missing many of the nutrients that we expect due to the commercial farming methods, the time spent in the warehouses, and the food processing, we must look to supplementation to truly supply all the body needs for functioning at peak levels and to boost the immune system.

The way a person metabolizes food is very important. For those with glucose intolerance of any type, metabolism of fats, proteins and carbohydrates is frequently a problem. **Sugar Shocker** has been formulated to take this into account. You will find numerous ingredients in the product that support proper metabolism and digestion of food and in supporting control of cholesterol production. **Sugar Shocker** contains all of the lipotropic factors (choline, betaine hcl, inositol & methionine). Lipotropics prevent an abnormal accumulation of fat in the liver. Lipotropics increase production of lecithin by the liver thereby helping to keep cholesterol more soluble and lessening deposits in blood vessels. They also detoxify amines, which are by-products of protein metabolism and aide in converting fat into useful energy. This lipotropic package supports the body in supporting insulin function.

As mentioned above, the nervous system is negatively affected for those with glucose intolerance. There are vitamins, minerals and herbs in **Sugar Shocker** that will promote the proper functioning of the nervous system and all neurotransmission functions.

Since most degenerative disease, including diabetes and hypoglycemia, begins because our body is too toxic from acid forming foods & stress, this formulation is alkalizing. **Sugar Shocker** contains alkaline forming ingredients that promote bioavailability and support changing the body pH. And like all of the products in this line, we know that instead of taking something that is acid forming into our body, we are taking an alkaline, high pH supplement.

The Vitamin C Complex and synergistic factors promote nutrient transport to all parts of the body. The digestive enzymes and high level of Lactobacillus support digestion of the nutrients so that they will not be eliminated in our stool. Additionally, these factors promote better digestion of the nutrients we obtain from our food all day.

Sugar Shocker has been especially formulated to support and promote better health for those with insulin sensitivities such as diabetes, hypoglycemia, insulin resistance, glucose intolerance or Syndrome X. We also strongly recommend that if you do have diabetes or are sugar sensitive, that you eat a diet rich in plant foods and low in dairy foods. Animal proteins may be eaten if taken in moderation and if you do not eat very fatty cuts of meat. Fish is recommended, as fish is high in the Omega Fatty Acids that are good for cholesterol balance and nervous system function. It is also important to drink 6 to 8 glasses of spring water with pH Plus daily. We know that those who have this aging disease have a lower pH than they should. When we have acid toxins in our body, they need to be flushed. It is especially important for those with insulin resistance and glucose intolerance to do so. Please ask the folks at NEWtritional Healthcare for some information on this important product and on why water is so important for us, sick or well. We also recommend that you consider taking MSM along with this program. MSM supports cellular energy production and supports joint health. MSM is a valuable nutrient that is responsible for cellular repair, synovial fluid levels, collagen and keratin formation and promotes a well functioning colon. Following a good dietary program, drinking lots of water with pH Plus, taking **Sugar Shocker** and MSM and getting the proper exercise will promote better health. Start on this healthy program today. Better nutritional practices may reverse the damage caused by aging and glucose intolerance.
